TITLE	Results 1993. Oklahoma Educational Indicators Program. District Report.
INSTITUTION	Oklahoma State Dept. of Education, Oklahoma City. Office of Accountability.
PUB DATE	Feb 94
NOTE	599p.; For the school report, see TM 022 621. For the state report, see ED 378 242.
PUB TYPE	Statistical Data (110)
EDRS PRICE	MF03/PC24 Plus Postage.
DESCRIPTORS	*Academic Achievement; Accountability; Achievement Gains; Achievement Tests; Annual Reports; College Entrance Examinations; Cost Effectiveness; Educational Assessment; Educational Change; Elementary Secondary Education; Enrollment; Outcomes of Education; Program Evaluation; Public Schools; *School Districts; Standardized Tests; *State Programs; Tables (Data); *Testing Programs; *Test Results
IDENTIFIERS	*Educational Indicators; *Oklahoma; Reform Efforts

ABSTRACT

This report is a graphic presentation of teacher and student information, revenue and expenditure data, test results, and other student outcomes for each public school district. The indicators in the district report reflect the increased student enrollment (594,326) and staff (38,290) in 1993, as well as the new cost accounting system used by the Oklahoma Department of Education. Achievement test scores have generally increased, while dropouts have declined slightly since 1990. A separate page for each district shows indicators in the following major categories: (1) teacher characteristics; (2) student outcomes; (3) student achievement; (4) student characteristics; (5) revenue sources; (6) areas of expenditure; and (7) revenues and expenditures on a per-pupil basis. Information is given in tabular form for 568 school districts. (SLD)

REPRINT

In accordance with Title 70 of the Oklahoma Statutes Sections 3-118 and 1210.531, this document is a summary to the people of Oklahoma of the relative accomplishments of the public schools and of progress being achieved for the school year beginning in the Fall of 1992 and ending in the Spring of 1993.

This publication was prepared by the Office of Accountability, was printed by the State Department of Education Printing Services, as authorized by Sandy Garrett, State Secretary of Education. Fifty copies have been prepared at a cost of $479.00. Copies have been deposited with the Publications Clearinghouse of the Oklahoma Department of Libraries. SEPTEMBER, 1994.

February 1, 1994

TO THE CITIZENS OF OKLAHOMA:

We are pleased at this time to present *Results 1993*, the annual report prepared by the Office of Accountability on the Oklahoma Educational Indicators Program. The Indicators Program is a system developed in accordance with the Oklahoma Education Reform Act of 1990 for the purpose of assessing the performance of public schools and school districts.

Results 1993 is being issued to inform the public of the progress which has been made in achieving the goals of quality education. As Oklahoma continues its implementation of educational reforms, we encourage educators, parents, community members, and other interested persons and groups to use the information contained in these reports to effect continued improvement for all children in the state.

Results 1993 includes data for the 1992-93 school year for all categories of measurement. Applicable indicators have been compiled separately for each school site, each school district, and the entire state. Information reported for these entities is contained in three separate reports, as described in the following paragraph.

The School Report provides data in tabular form related to test results and other outcomes, as well as student and teacher information, for each public school site. The District Report is a graphic presentation of student and teacher information, revenue and expenditure data, test results, and other student outcomes for each public school district. The State Report contains a graphic display of state-level results for each major indicator for the most recent four-year period, plus a summary showing the progress made thus far in complying with the provisions of Oklahoma's 1990 Education Reform Act.

Results 1993 is truly a "report card" for Oklahoma's schools, in that it provides information to the public for its assessment of student learning in a wide range of categories. It also provides information about teachers and the resources available to meet Oklahoma's educational goals. Above all, the Indicators Program is concerned with results. It is designed to serve as an accurate system of educational measurement, without placing undue reliance upon any single type of indicator.

Sincerely,

Sandy Garrett

Sandy Garrett
Secretary of Education

DISTRICT REPORT

I. EXECUTIVE SUMMARY

Results 1993 is the "report card" prepared by the Oklahoma Office of Accountability to reflect progress on various measurements of educational performance, as provided in the Oklahoma Educational Indicators Program. Statistical information on a wide array of educational indicators is presented by school site, school district, and the entire state. For the major indicators, changes in state results for the most recent four-year period, where available, are highlighted in the following paragraphs.

Oklahoma's student enrollment in public schools has increased from 573,323 in 1990 to 594,326 in 1993, based upon average daily membership (ADM). This reflects an increase of 3.7% during this period. There has also been a change in the ethnic makeup of our student population since 1990. The number of students in each ethnic category stated as a percentage of the total student population is shown as follows for 1990 and 1993:

	1990	1993	Change
Native American	11.4%	13.0%	1.6%
Hispanic	2.6%	3.1%	0.5%
Black	9.9%	10.2%	0.3%
Asian	1.1%	1.2%	0.1%
White	75.0%	72.5%	-2.5%

In regard to classroom teachers, the number of Full-Time Equivalent (FTE) staff increased from 35,559 in 1990 to 38,290 in 1993, a growth rate of 7.7%. During this same time period, the average teacher salary went from $24,659 to $28,170, an increase of 14.2%. The percent of teachers with advance degrees decreased from 41.1% in 1990 to 38.7% in 1993, while the average number of years as a teacher was 11.7 in 1993, the same as it was in 1990.

For student achievement, there was an increase in test scores at the state level in 1993 over 1990 in all grades taking the current Iowa Tests of Basic Skills and Tests of Achievement and Proficiency (ITBS/TAP), which were introduced in 1990. The composite percentiles are shown as follows for each grade:

	3rd	5th	7th	9th	11th
1990	55	58	57	59	53
1993	62	64	60	61	59

The average composite score for the American College Test (ACT) was 20.2, compared to 20.0 in 1990, the first year the current test was introduced. The national average for 1990 and 1993 was 20.6 and 20.7, respectively. However, on the Scholastic Achievement Test (SAT), the verbal and math scores in 1993 (482 and 530, respectively) were well above the national average and were both higher than in 1990 (478 and 523, respectively).

All districts in the state converted to the new Oklahoma Cost Accounting System (OCAS) during the 1991-92 school year. Accordingly, this year's Indicators Reports are the first to contain financial results based upon OCAS procedures. These procedures not only ensure uniform reporting from all districts, but also provide much greater accounting detail. Whereas the revenues and expenditures contained in this report involve the General Fund only, it is possible under OCAS to obtain details for other funds as well. Accordingly, we plan to expand the reporting to include revenues and expenditures from other funds in future reports.

I. EXECUTIVE SUMMARY
(Continued)

More than $2.1 billion in total revenues was funded for common education in 1993, an increase of 23.5% over the $1.7 billion funded in 1990. Of the 1993 total, nearly $1.5 billion (approximately 70%) was in state funds. This was an increase of about 37% over the $1.1 billion in state revenues in 1990. Local and federal revenues in 1993 were $492 million and $149 million, respectively, compared to $519 million and $123 million, respectively in 1990.

There was a total of more than $2.1 billion in expenditures on common education in 1993, which was an increase of 23.5% over the $1.7 billion spent in 1990. Of the 1993 total, more than $1.3 billion (62%) was spent on instruction. This was an increase of 21% over the $1.1 billion spent for instruction in 1990.

Other student information is shown as follows for 1990 and 1993:

	1990	1993	Change from 1990 to 1993
Dropout Rate	3.6%	3.2%	-0.4%
% Eligible for Free or Reduced-Payment Lunch	36.0%	39.1%	3.1%
% Identified for Special Education	11.3%	11.8%	0.5%
Graduation Rate	78.0%	77.1%	-0.9%

. II. INTRODUCTION

The Oklahoma Educational Indicators Program was established in May, 1989, by Senate Bill 183. All provisions of the program were later included in House Bill 1017, commonly referred to as the Oklahoma Education Reform Act, which was approved by the Governor in April, 1990. As a result of an initiative petition, this act was also approved in a vote by Oklahoma's general populace in October, 1991. The Indicators Program is a system developed for the dual purpose of: (1) assessing the performance of public schools and school districts, and (2) reporting to students, parents, and the general public the progress being made in meeting the provisions of the Education Reform Act. It is intended that there be no undue reliance placed upon any single type of indicator.

The statutes provide that a summary report be prepared each year to inform the people of Oklahoma of the latest results for all categories of measurement included in the Indicators Program. In accordance with this provision, the indicators authorized by the Reform Act have been compiled for the 1992-93 school year separately for each school site, each school district, and the entire state, to the extent that the applicable data is available for each of these entities. The reports prepared for each entity are contained in a separate volume, under the master title of *Results 1993*. The contents of the reports are explained briefly as follows:

1. School Report. This volume contains achievement and writing test scores in tabular form by grade level and subject for each individual school site for the 1992-93 school year. State averages are included for each category so that comparisons may be readily made. Also included in this volume are student enrollment figures, free-lunch eligibility data, and teacher information. In addition, there are appendices showing data for early childhood enrollment, student dropouts, ACT scores, Oklahoma college-going rates, and grade point averages (GPAs) for Oklahoma college freshmen who graduated from high school in 1992.

2. District Report. This volume contains a separate page for each district showing indicators in graphic form for the 1992-93 school year. Major categories included are teacher characteristics, student outcomes, student achievement, student characteristics, revenue sources, areas of expenditures, and revenue and expenditure on a per pupil basis. School districts have been placed in groups based upon factors found to be important to student performance so that reasonable comparisons may be made.

3. State Report. This volume contains graphs of state-level results for the 1992-93 and preceding school years, where available, for the major categories of measurement. Also included in this volume is a summary of provisions of the Education Reform Act showing the progress made thus far in complying with the various provisions.

The information contained in *Results 1993* has been compiled for the purpose of informing the public of the progress which has been made during the year towards achieving the state goal of top quality education, as Oklahoma moves forward with its comprehensive education reform program.

III. NATIONAL EDUCATION GOALS

During the Education Summit convened by the President with the nation's governors in 1989, six fundamental goals were established for American schools, each of which is to be accomplished by the year 2000. These goals, initially embraced by Governor Walters, have since been formally adopted by the Oklahoma State Board of Education. The State Department of Education, along with all educators throughout the state, are committed to achieving these goals by the year 2000. The goals are listed as follows:

1. All children in America will start school ready to learn.
2. The high school graduation rate will increase to at least 90 percent.
3. American students will leave grades four, eight, and twelve having demonstrated competency in challenging subject matter, including English, mathematics, science, history, and geography; and every school in America will ensure that all students learn to use their minds well, so they may be prepared for responsible citizenship, further learning, and productive employment in our modern economy.
4. U. S. students will be first in the world in science and mathematics achievement.
5. Every adult American will be literate and will possess the knowledge and skills necessary to compete in a global economy and exercise the rights and responsibilities of citizenship.
6. Every school in America will be free of drugs and violence and will offer a disciplined environment conducive to learning.

IV. DESCRIPTION OF DATA IN THE DISTRICT REPORTS

The District Report of *Results 1993* is comprised of separate pages for each district, with each page containing graphs and charts of data for the 1992-93 school year unless otherwise indicated. Charts containing district, similar district, and state information represent the individual district data, the average of all districts in that group, and state average data, respectively. The group number in the upper right corner of the page represents the classification group for the district, as explained in Section V. Districts with the same group number have the same "similar district" group membership. Shown for the first time on this year's report, immediately under the district name, is school board information, i.e., the number of members and the number with a high school diploma or equivalent certificate.

The information for each district is explained as follows:

1. Student Outcomes:

A. Attendance Rate: The student attendance rate is calculated by dividing the Average Daily Attendance (ADA) by the Average Daily Membership (ADM) for the entire school year.

B. Dropout Rate: The dropout rate is calculated by dividing the number of reported dropouts in grades 9-12 **under the age of eighteen** (statutory definition) by the Average Daily Membership (ADM) in grades 9-12.

C. ACT Score: As reported by the Oklahoma State Regents for Higher Education (OSRHE), this figure is the average composite score on the American College Test (ACT) for 1993.

D. Oklahoma College-Going Rate: Also reported by the OSRHE, this rate is computed by taking the number of students in the 17 through 19 age group, as identified in OSRHE's post-secondary Unitized Data System (UDS) file, divided by the number of Oklahoma students reported as graduating from high school in May, 1992. The UDS database contains a record for each student enrolled in public and private colleges and universities in Oklahoma in the Fall of 1992. The following caveats exist in the identification of post-secondary students:

1) The UDS file does not include students who were accepted at an institution but did not enroll, students who enrolled but did not attend classes, or students who enrolled but withdrew within two weeks after classes started.

2) Students who attend college out-of-state are not included in the UDS system and consequently are not accounted for in the Oklahoma college-going rates.

3) All students who attend Oklahoma colleges and universities are accounted for in the Oklahoma college-going rates except those who attend Phillips University, which does not participate in the UDS system.

E. Student Achievement: Results are from the Oklahoma School Testing Program. The program tests students in grades 3, 5, 7, 9, and 11, using a nationally normed standardized achievement test. The Iowa Tests of Basic Skills (ITBS) were selected for use in grades 3, 5, and 7. The Tests of Achievement and Proficiency (TAP) were selected for use in grades 9 and 11. A nationally-normed writing test from the Stanford Writing Assessment Program is given to students in grades 7 and 10.

A nationally-normed achievement test is developed by randomly selecting a nationally-representative sample of students by factors such as race, gender, socio-economic level, and geographic location. Normative (average) performance by test item and subject area is determined during the pilot testing phase of development from the test results of the sample group. The normative outcomes from the nationally-representative sample become the basis for gauging the performance of students who are subsequently administered the final published and commercially-available versions of the test.

2. Background, Context, and Process Measures

A. **Enrollment**: This figure reflects the average daily membership (ADM) across the entire school year rounded to the nearest whole number. ADM is calculated by dividing the total days membership throughout the school year by the number of days taught.

B. **Classroom Teachers**: This figure represents the classroom full-time equivalency (FTE) among instructional staff throughout the school year rounded to the nearest whole number . The classroom FTE includes kindergarten, elementary, middle school, Jr. high, high school, and specialty teachers and one-half (.5) FTE for each teaching principal.

C. **Number of Sites**: This is the number of school sites contained throughout the district.

D. **Highest grade served**: This figure reflects the highest grade level taught in the district.

E. **Teacher characteristics**: Included under this heading are the average teacher salary amounts, (including fringe benefits), percent of teaching staff with an advanced degree (masters and above), and the average years of experience among the teaching staff. Average salary is computed by dividing the sum of gross salaries and fringe by the classroom FTE. Percent advanced degree is computed by dividing the sum of the classroom FTE with an advanced degree by the total classroom FTE. Average years of experience is computed by dividing the total years of experience for classroom teachers by the classroom FTE.

F. **Student characteristics**: Included under this heading are the percentage of students who were eligible to receive free or reduced-payment lunches from the federal school lunch program, the percentage of students from minority groups, and the percentage of students served in special education. These percentages were based on total district enrollment. The percentage of free (and reduced) lunch is derived by dividing the number of students eligible for free or reduced lunch by the average daily membership (ADM). The percentage of minority students is computed by dividing the cumulative fall membership count among native American, Asian, Hispanic, and Black students into total fall membership. The Special Education percentage is derived by dividing the non-duplicated special education student count by the ADM.

G. **Sources of revenue**: Reported under this heading are the total revenue percentages in the general fund received from local, state, and federal sources. Local revenue is the sum of all revenues reported under the 1000 and 2000 series of revenues under the Oklahoma Cost Accounting System (OCAS). County revenues are included in the local revenue total. State revenue is the sum of all revenues reported within the 3000 series of revenues. This included both state appropriated and state dedicated revenues. Federal sources of revenue are reported under the 4000 series of revenue source codes.

H. **Areas of expenditure**: These figures are the total expenditure percentages from the general fund devoted to instruction, instructional support, district administration, district support, school administration, student support, and other operations. Instructional expenditures are reported under the 1000 series function codes in OCAS. Instructional support is reported under the 2200 expenditure function code, district administration under the 2300 function code, district support under the 2500-2900 expenditure function codes, school administration under the 2400 function code, and student support under the 2100 expenditure function code. The expenditure category "other" is based on expenditures from the 3000 through 8000 function codes.

I. **Revenue & expenditure per student**: The amount of money received and the amount spent per student are reflected in this category. The revenue figure was based on the total amount of money available to the district including carryover funds. Expenditure figures were calculated both on total expenditures and the amount spent on instruction. ADM was used to calculate per pupil total revenue, total expenditure, and instructional expenditure figures.

V. DISTRICT CLASSIFICATION METHOD

Results 1993 contains district information for the 1992-93 school year for all measurement categories, including revenues and expenditures, which in past years were available only for the year prior to that under report. Districts which were in operation for 1992-93 are included in the *Results 1993* report, including those which were closed, annexed, or consolidated for the 1993-94 school year.

All school districts in the report have been placed into one of eight classification groups. The purpose of classifying school districts is to formulate groups of districts on the basis of a combination of all factors related to student performance. Student performance is based on test scores from the Iowa Tests of Basic Skills/Tests of Achievement (ITBS/TAP) mandated in the Oklahoma School Testing Program.

The primary goal of performing the district grouping was to create clusters of similar districts in order to allow for equitable comparisons of school districts. In the statistical analyses performed, all available factors were included in a multiple regression procedure using a model that yielded a weighted value for each variable in relation to student achievement. The weighted value represents the extent to which a variable is a predictor of student scores on the standardized tests.

Modifications were performed on two variables prior to conducting the regression procedure. The first modification was made on the dependent variable itself, student achievement. The composite NCE (Normal Curve Equivalent) was aggregated across all the grades which took the ITBS/TAP tests in order to create an "overall" district composite score. By performing a weighted aggregation of scores across grades, the aggregated score is more stable because it is based upon a larger number of students tested. This is especially useful in school districts that test only a small number of students at each grade. In these districts, one or two extremely high or low test scores in any given grade may have a dramatic effect on the district average score in that grade. Performing a cross-grade aggregation results in minimizing the effect of scores at both ends of the distribution. In addition, cross-grade aggregation is advisable since all the predictor variables in the model are based on an overall district average. For example, the percentage of students eligible for free or reduced lunch is based on a districtwide calculation and is not readily available on a grade-by-grade basis. Since no grade-specific data is available for most of the predictor variables, it seems inappropriate to analyze districtwide background data in relation to individual grade-level outcome measures. Therefore, it seems appropriate for the dependent variable, student achievement, to be "overall" as well.

The other variable that was modified prior to conducting the analyses is the free or reduced-payment lunch eligibility. It is well known that there is a significant non-application for free or reduced-payment lunch eligibility at the high school level. This results in an underestimation of the low socio-economic status in districts that have high schools. School districts that do not have high schools are not affected by this under-reporting. Thus, comparing the free or reduced-payment lunch eligible percentages of elementary districts (grades K-8, K-6) with independent districts (grades K-12) would be spurious. To correct this problem, separate distributions for elementary districts and independent districts were created. Standard scores (Z-scores) were calculated for each distribution and then combined into one single measurement. This was performed because the Z-score value for free or reduced-payment lunch eligibility would be a better representation of a school district's actual socio-economic level than the raw percentage. For example, a 50% free or reduced-payment lunch enrollment for an independent district would result in a Z-score most probably representing a lower socio-economic status level than a 50% free or reduced-payment lunch socio-economic level for an elementary district.

In the aggregation process, a minimum of 30 students must have been tested across all grades given the ITBS/TAP tests in order to be included in the statistical model. This is based on the generally-recognized minimum required to have a normal distribution of scores. A total of 509 out of the 568 districts in this report met the minimum requirement of 30 or more students tested overall. The remaining districts were slotted into a group on the basis of examining the data on those variables generally recognized as having the most potent influences on test scores. These variables include the percent of enrollment eligible for free or reduced-payment lunch, the percent of minorities in a district, and the percent of revenue from local sources.

The regression equation that came forth from the analyses yielded a predicted score for every school district which qualified to be in the model (509 districts) based on the weighted value for all the variables in the model in relation to student achievement. Predicted scores were then sorted from highest to lowest. The predicted score variable had a normalized distribution, meaning that there was more "bunching" of districts in the middle of the distribution than at either end. Groups were formed on the basis of one-half standard deviation blocks (see below) using the statewide average expected score (standard deviation of 0.0) as the mid-point. Positive standard deviations represent expected scores above the statewide average expected score while negative standard deviations represent expected scores below the statewide average expected score. Thus, the formation of the eight groups of districts shows the largest group memberships in groups 4 and 5 (108 members and 110 members, respectively) while the smallest group memberships are in groups 1 and 8 (43 members and 32 members, respectively). The groups are ordered so that group 1 represents the most "advantaged" districts while group 8 represents the most "disadvantaged" districts.

A regression model using all available predictors was used in the analysis. However, it is useful to identify the variables that had the greatest impact on the predicted score. The most potent variable was prior-year achievement on the standardized tests, which had a correlation with achievement of greater than 0.7. Since such a strong relationship exists between prior-year and current year achievement, prior-year achievement determines to a great extent the district classification group membership. This effect reflects the notion that once a level of performance in achievement is demonstrated, such performance levels should be maintained over time even as new student cohorts with different sets of preabilities move through the system. This expected consistency in achievement performance is probably more easily maintained in those districts with large student enrollment since group to group homogeneity is more likely and the effect of preability outliers is minimized. Beyond prior-year achievement, the next most influential variables in this year's prediction model were free or reduced-payment lunch eligibility, minority enrollment, and local revenue.
